

UNICAMILLUS

Bachelor's degree program in Biomedical Laboratory Techniques

Teaching: FINAL EXAM

Responsible Teacher: [Fabio Marcuccilli](#) **_e-mail:** fabio.marcuccilli@unicamillus.org

SSD Teaching: MEDS-26/A

Number of CFUs: 6

PREREQUISITES

-To be admitted to the final examination, one must have earned all CFUs in the educational activities included in the curriculum, with the exception of CFUs related to the final examination itself.

-The test is established, by decree of the Minister of University and Research in consultation with the Minister of Health, in two nationally defined sessions.

-The paper must be based on experimental work, having the character of originality.

-The paper shall be written under the responsibility of a Rapporteur, university lecturer/faculty member and a possible correlator.

-It is possible to entrust the correlation of dissertations to lecturers from other universities or external experts, according to the University regulations

METHODS OF CONDUCTING THE PRACTICAL TEST

-**Practical test:** the student must demonstrate that he/she has acquired the theoretical-practical and technical-operational knowledge and skills proper to the specific professional profile;

- **Original paper (thesis)** and its dissertation. Cf. Ministerial Decree February 19, 2009, art.7: The thesis will deal with a topic congruent with one of the basic, characterizing, related or integrative scientific-disciplinary fields, or, in any case, consistent with the educational objectives of the degree in Biomedical Laboratory Techniques. In the paper, the student summarizes the knowledge acquired on the topic agreed upon with the lecturer/speaker, demonstrating the ability to critically process the information gathered from both laboratory experiments and bibliographic data.

The final examination consists of a public discussion of the thesis in the presence of a faculty panel, which will evaluate the expository skills and cultural maturity attained by the candidate in the course of his or her studies.
