SCIENCE AND PREVENTION OF MALE INFERTILITY:

UniCamillus launches the MIP project
Male Infertility Prevention -
an exclusive service for students

**Did you know that about 45%
of young men aged 18–26 show an alteration in
fertility, known as sub-fertility?**

Subfertility is a precursor to infertility, but it can potentially be corrected. It is often the first sign of metabolic imbalances and suboptimal lifestyles.
EARLY INTERVENTION IS ESSENTIAL!

UniCamillus launches the MIP project – Male Infertility Prevention

An exclusive service for UniCamillus students, thanks to the precious collaboration with “Alma Res Fertility Center” and “Villa Mafalda”, dedicated to preventive screening of male fertility. For **ONLY 10 EUROS**, you will receive a complete analysis of your fertility status through a semen analysis and an innovative biochemical analysis of your seminal fluid.

Why participate?

- Learn about your reproductive health status
- Increase your awareness
- Receive personalized advice on lifestyle and prevention

A DAY TO LEARN SOMETHING ESSENTIAL ABOUT
YOUR BODY... AND YOUR FUTURE!

PROGRAM

Male infertility:
causes and epidemiological data

The spermogram:
how it works and what it reveals

The Biochemical analysis of seminal fluid:
a new approach to the study of fertility

Presentation of the MIP project
Male Infertility Prevention:
an exclusive service for UniCamillus
students dedicated to preventive screening
of male fertility

Speakers:

Prof. Giacomo Lazzarino
Prof. Barbara Tavazzi
Dr. Gabriele Bilotta
Prof. Ermanno Greco

**Knowing your fertility
today means having more
freedom tomorrow!**
